

STRATOGRAPHE

SINGLE-PUSHER CHRONOGRAPH

The [Blacksand Genève](#) STRATOGRAPHE is a sophisticated and amazing single-pusher chronograph.

It draws the gaze with its unique styling and confirms an intensely personal time. It comes in a tachymeter version for speed fans, and a "pulsometer" version to keep track of intense emotions.

This chronometer symbolises a new era for the Geneva-based brand, with the presentation of the first calibre entirely designed and developed by [Blacksand Genève](#). It heralds the new release for 2012 in the Uniformity men's collection.

FIRST ENTIRELY IN-HOUSE MOVEMENT: [Blacksand Calibre 2002](#)

Designed according to the specifications and standards imposed by the founder of [Blacksand Genève](#), the STRATOGRAPHE features all the essential brand codes in the shape of a highly contemporary aesthetic and a "Semper fidelis" (ever faithful) approach to traditional watchmaking.

Blacksand Calibre 2002 offers a blend of tradition and modernity. The mechanism highlights the traditional column wheel, along with an unconventional approach to the global movement aesthetic with its personalised components.

A PULSOMETER to measure emotions...

In this model stemming from the heart-felt dream of the [Blacksand Genève](#) founder, and created by his team driven by the same approach, it was almost natural to wish to measure the heartbeat of [Blacksand Genève](#) collectors.

A TACHYMETER to measure speed

Named from a combination of the Greek words *takhus* (fast) and *metron* (measure), the tachymeter features a dial graduation enabling immediate speed measurement. The tachymetric divisions and graduated hourly speed graduations enable instant reading of the desired result.

Distinctive aesthetic

The immediately identifiable single-pusher STRATOGRAPHE chronograph is endowed with a strong aesthetic featuring a blend of sportsmanship and contemporary elegance.

Case: the case middle is specific to the Uniformity collection. Its easily identifiable curve is composed of nine interchangeable elements. It is made of titanium and ceramics and/or white or rose gold, and enables collectors to play with a choice of materials.

Dial: the character of the dial is revealed by a touch of mauve, the brand's aesthetic signature, which is echoed on the tip of the central seconds hand and on the subdial, as well as on the inside of the grey or black alligator strap in matt or shiny versions.

The sweep seconds hand is personalised to reflect the brand identity with mauve tips and a small hourglass logo pointing to the passing time.

The unconventional style of this model confirms [Blacksand Genève](#) as exemplifying a contemporary mood while epitomising the spirit of its "Semper Fidelis" motto by paying tribute to traditional watchmaking.

STRATOGRAPHE

THE PULSOMETER

The STRATOGRAPHE pulsometer features a graduation based on 30 pulse beats. The Uniformity line welcomes this Pulsometer version, a tribute to the famous classic medical watches. Mechanical hand-wound single-pusher column-wheel chronograph.

THE TACHYMETER

The STRATOGRAPHE Tachymeter has a dial with an hourly speed graduation measuring up to 400 km/h and appearing around the outside of the divisions marking off fifths of a second.

Like all models in the Uniformity collection, the Single-Pusher Stratographe Chronograph has a screw-in two-part caseback, a personalised ceramic-caped pusher, a sapphire crystal with an invisible logo marking revealed under the effect of heat; and an ultimate touch of refinement in the shape of a decorative fillet indicating the correct position of the engravings. Reflecting the tireless quest for supreme functionality pursued by Blacksand Genève, the optimal receptiveness of the hour-markers or Arabic numerals to the Super Luminova luminescent material creates a fascinating blue light. Delivered with two interchangeable wristbands with a triple-blade folding clasp, including one in HNBR technical rubber. Also available in materials such as grade 5 titanium or 5N rose gold.
